

Figure 1. A schematic diagram illustrating the experimental design. The figure shows a sequence of events starting from a participant's arrival at the laboratory. The participant is first informed about the experiment and then given a practice trial. This is followed by three main trials, each consisting of a stimulus presentation phase and a response phase. The stimuli are presented in a random order, and the responses are recorded. The results are then analyzed to determine the effect of the stimulus on the response.
